

## Installation of the YajHFC OpenOffice extension

1. Open the extension manager using "Tools"->"Extension Manager..."
2. Click "Add..."
3. Select the file `YajHFCFax.zip` included in this archive
4. Restart OpenOffice
5. If the installation was successful, you should now see a new tool bar with a small fax icon and a new menu item "YajHFC fax" under "Tools"->"Add-Ons".  
If you don't see the tool bar, check if the "Add-On" tool bar is selected under "View"->"Tool bars"
6. Go to "Tools"->"Add-Ons"->"YajHFC fax"->"Configuration..." and enter the path to the YajHFC jar file (e.g. `C:\Program Files\YajHFC\yajhfc.jar`) and to the java executable (usually found under `bin/java` in the Java installation directory; using the default might work in many cases, too)
7. Open some document and click the tool bar icon to test the installation  
(or select "Tools"->"Add-Ons"->"YajHFC fax"->"Send document as fax...").  
YajHFC should now start and show the "Send fax" dialog with a PDF file in the "File(s)" list.
8. Done.
